1. Executive summary

Brubru is an AI-powered strategic advocacy platform purpose-built for EU policy professionals. It combines a conversational AI assistant with specialised legislative tools: amendment drafting, compliance analysis, tender intelligence, legislative monitoring, predictive analytics, and a closed-loop feedback system. It replaces the fragmented workflow of lobbyists, consultants, trade associations, and government affairs teams operating within the Brussels ecosystem.

The EU public affairs market is valued at EUR 3-5 billion annually. Today, this work is done by expensive human consultants charging EUR 250-500/hour, using generic tools that have no understanding of EU institutional procedures. Brubru encodes deep procedural knowledge from 15+ EU institutional data sources into an AI platform that produces analyst-grade work at software costs.

Vision: From AI-powered advocacy platform to the **system of record for EU affairs**: the single workspace where a professional's entire dossier lives: tracked legislation, drafted amendments, MEP relationships, stakeholder positions, predictions, documents, and campaign history. Then expand nationally: 27 Member States, every level of governance, one platform per country. Nobody in EU affairs has a dossier management system powered by real-time institutional data and AI. That's the product.

Built PRODUCT STATUS 8 modules, 34 APIs, 29 scrapers	15+ DATA SOURCES 29 institutional scrapers	79-90% GROSS MARGIN Software economics	55 subs BREAK-EVEN ~55 paid at EUR 55 blended ARPU
---	---	---	---

"EU policy professionals spend EUR 500-1,000/day on work that AI can now produce in minutes. Brubru encodes 17 years of Brussels expertise into software: analyst-grade work at software costs."

2. The problem

EU policy professionals face a uniquely complex working environment: fragmented information across 15+ institutional sources, arcane procedural knowledge that takes years to develop, expensive manual deliverables, and no purpose-built tools. US political intelligence has FiscalNote (\$1.5B), Quorum, and Bloomberg Government. Legal AI has Harvey (\$3B+). EU policy has nothing.

PAIN POINT	TIME LOST	COST IMPACT
Monitoring 15+ EU sources daily	2-4 hrs/day	EUR 500-1,000/day in consultant time
Drafting a position paper	3-5 days	EUR 5,000-15,000 per deliverable
Compliance gap analysis for new regulation	2-4 weeks	EUR 20,000-50,000 per assessment
Understanding procedure for new dossier	1-2 days	EUR 2,000-4,000 per dossier
Finding relevant EU tenders	1-2 hrs/day	Missed opportunities worth EUR 100K+

3. The solution

Brubru replaces fragmented workflows with a single AI-powered platform that understands EU institutional procedures natively. It is not a chatbot with EU data bolted on: it is a purpose-built advocacy workbench designed around the specific deliverables and workflows EU policy professionals produce daily.

BRUBRU FEATURE	REPLACES	TIME SAVED
My EU Bubble	Manual monitoring of 15+ sources	80%
Document Generator	Manual position paper drafting (3-5 days)	90%
EU Law Comply	Compliance consultants (EUR 20-50K)	85%
Brubru Chat	Senior consultant Q&A (EUR 250-500/hr)	70%
Tenderator	Manual TED search (1-2 hrs/day)	75%
Amendator	Manual amendment drafting + XML formatting	60%

From workflow platform to system of record

Brubru has built an exceptionally strong **vertical workflow platform** (Layer 3) with 10 feature verticals, 35 scrapers, and 11 prediction services. The next strategic step is the transition to **system of record** (Layer 4): tying all features together around the concept of a **user-owned dossier**: a workspace per legislative file where tracking, amendments, contacts, predictions, and documents accumulate into an asset the user cannot replicate elsewhere.

LAYER	DESCRIPTION	BRUBRU STATUS
Layer 1-2	Foundation models + Chat	Done (4-provider chain, context-aware chat)
Layer 3	Vertical workflow platform	Substantially built (10 verticals, 35 scrapers)
Layer 4	System of record	Next phase (dossier workspaces, contacts, accumulated user data)

Today's system of record for EU affairs is fragmented across Outlook, Excel, shared drives, and mental models. Nobody owns this. A lobbyist with 50 annotated dossiers, 200 MEP contacts, and 18 months of prediction history inside Brubru will never leave, regardless of what foundation models do.

4. Product suite

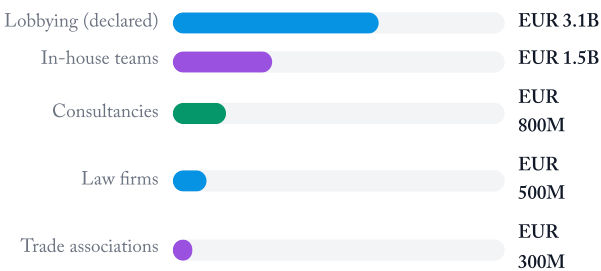

Ten integrated modules covering the full EU advocacy workflow: Monitor > Analyse > Compare > Draft > Comply > Predict > Bid > Improve.

#	MODULE	DESCRIPTION	TIER
1	Brubru Chat	Context-aware AI advisor. 4-provider chain (Mistral/Claude/GPT-4/Gemini), 15+ context sources injected per query, citation tracking, conversation memory, Beresol Knowledge Bundle (11 reports, 7 monitors).	All
2	My EU Bubble	Personalised monitoring dashboard: 33+ RSS feeds, Legislative Train (490+ files), 26 EP committee trackers, EC public consultations, predictions engine, document generation, My EU Calendar, analytics.	All
3	Amendator	XML-first amendment editor modelled on EP's AT4AM. AI drafting in natural language, Akoma Ntoso compliance, multi-format export (XML, HTML, PDF, Word), amendment workflow (Candidate/Tabled/Withdrawn).	Starter+
4	MEP Amendments	Real EP committee amendment data from Open Data Portal. Political group breakdown, hotspot analysis, word-level diffs. AI-powered comparative analysis: alignment scoring (-2 to +2), best allies, coverage gaps, political landscape.	Starter+
5	My EU Calendar	Multi-source institutional calendar: 274+ events from EP (plenary, committee weeks, 26 committee agendas), Council/European Council, Commission College (with OJ agenda enrichment), ECB. Month/week/day views, filters, AI daily summary.	Starter+
6	EU Law Comply	Automated compliance gap analysis: document upload, requirement extraction, severity ratings, action plan timeline. Covers AI Act, GDPR, NIS2, CSRD, MiCA, DORA.	Starter+
7	Tenderator	AI-matched EU tender intelligence from TED. Organisation profiling, SME suitability scoring, bid checklist generation, SPARQL market analytics, HuggingFace classification.	Professional
8	Document Generator	AI-powered position papers, MEP briefings, and talking points via step-by-step wizard. Links to specific legislation via CELEX numbers.	Starter+
9	Predictions Engine	AI legislative forecasting: timeline (survival analysis), outcome, EP plenary vote (9 groups, 720 MEPs), Council vote (QMV), resolution leading indicators.	Starter+
10	Feedback System	Closed-loop improvement engine: inline ratings, conversation quality scoring (0-10), knowledge gap tracking, hallucination suppression, 5 systematic improvement loops.	All

Plus: **Admin Panel**, user management, feed management, chat analytics, feedback management, legislative tracking admin, system monitoring.

5.3 Why now: three converging forces

- 1. Regulatory wave (2026-2028).** AI Act, MiCA, CSRD, NIS2, DORA, Packaging Regulation: unprecedented compliance deadlines hitting simultaneously.
- 2. AI capability threshold.** LLMs crossed the quality threshold for analyst-grade regulatory work in 2024-2025.
- 3. Market vacancy.** US has FiscalNote (\$1.5B) and Harvey (\$3B+). EU policy intelligence has zero purpose-built AI platforms.

6. Competitive landscape

COMPETITOR	EU FOCUS	AI CHAT	AMENDMENTS	MEP ANALYSIS	CALENDAR	COMPLIANCE	TENDERS	PREDICTIONS	PRICE
Brubru	✓ Deep	✓	✓ XML	✓ AI	✓ 6 src	✓	✓	✓	EUR 19-99

Traditional consultancy	✓	×	Manual	Manual	×	Manual	×	×	EUR 10K+/mo

Competitive advantages

1. Workflow completeness vs. Dixit/SAVOIRR. Full advocacy cycle: Monitor (My EU Bubble, EU Calendar) > Analyse (Chat, MEP Amendments) > Compare (AI alignment scoring, best allies, coverage gaps) > Draft (Amendator, Document Generator) > Comply > Predict > Bid. Dixit covers monitoring+analysis but not creation. SAVOIRR lacks drafting and predictions.

2. Akoma Ntoso XML + MEP Intelligence vs. FiscalNote/LEOS. Standards-compliant legislative amendments plus real MEP amendment data with AI comparative scoring. Draft your amendments, see what MEPs proposed, identify allies, spot gaps. FiscalNote drafts generic text with no MEP analysis. LEOS uses AKN but is institutional-only with no AI.

3. 10x price advantage vs. POLITICO Pro/FiscalNote. EUR 948-7,188/yr vs EUR 7K-50K+ (POLITICO) or EUR 10K-30K (FiscalNote). Mistral primary = 15x cost advantage, 90%+ margins.

4. Domain depth vs. generic AI. 35 scrapers, 15+ institutional data pipelines, structured procedural knowledge: 18 months of data engineering that generic AI cannot replicate.

5. Founder-market fit vs. all. 7+ years EP + 10+ years EU advisory. Built by a parliamentary insider who personally produced every deliverable the platform automates.

6. Structural defensibility through accumulated user data. Long-term defensibility comes from switching costs, not feature checklists. When a professional has 50+ dossiers, 200+ MEP contacts, 18 months of amendment history, and 30+ position papers inside the platform, the cost of switching becomes prohibitive. This is the difference between a workflow tool and a system of record.

7. Defence against foundation model plugins. The risk is not another SaaS competitor: it is ChatGPT/Claude adding EU policy plugins. Defence: (1) depth of structured pipelines that general plugins cannot match, (2) domain engineering (Akoma Ntoso, QMV, compliance gap analysis) beyond data access, and (3) the system-of-record layer where user-accumulated dossiers, contacts, and documents live inside Brubru and nowhere else.

LTV	EUR 527	EUR 1,275	EUR 4,450
Target CAC (3:1)	EUR 176	EUR 425	EUR 1,483

Pricing evolution. The modular model (individual modules from EUR 19/month, bundles from EUR 39-99/month) lowers the entry barrier and drives higher conversion from trial users. As AI agents augment human workflows, Brubru will explore outcome-based pricing: per-dossier workspace fees, per-report credits, or enterprise flat-rate models tied to legislative portfolio size rather than headcount.

8. Technology and architecture

8.1 AI provider chain

11. Team, roadmap and risks

Founder

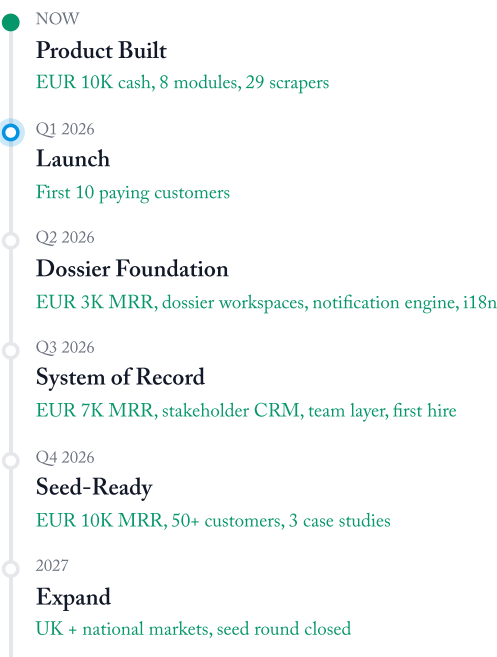

Victor Solé, founder and CEO

- 7+ years at the European Parliament (policy, procedure, legislative drafting)
- 10+ years EU policy advisory (trade, digital, regulatory affairs)
- Full-stack developer: built entire Brubru platform solo
- Fluent in 6 languages (EN, ES, CA, FR, IT, NL)
- Based in Brussels

Key hires

ROLE	WHEN	WHY
Head of Sales / BD	Month 3	Convert network into customers
Junior Developer	Month 6	Scale features, reduce bus factor
Customer Success	Month 9	Onboarding, retention, upsell

Roadmap

Risk assessment

RISK	P	I	MITIGATION
Low conversion rate	Med	High	Improve onboarding, feature gates, free-to-paid triggers
Single founder	High	High	Document everything, hire early, build recurring revenue
Free user costs	Med	Med	Cap at 500 users, reduce free amendments
AI cost spike	Low	Med	4-provider fallback chain, Mistral primary (15x cheaper)
Foundation model plugins	Med	Med	Pipeline depth (35 scrapers) + domain engineering (AKN, QMV) + system-of-record lock-in (dossiers, contacts)
Slow enterprise sales	High	Med	Parallel SaaS + agency model, consultancy revenue funds patience

12. Funding and use of proceeds

Seed round (target M12-18)		Use of funds (EUR 500K)	
Round size	EUR 500K - 1M	Engineering (40%)	EUR 200K
Valuation	EUR 3-5M pre-money	Sales & Marketing (35%)	EUR 175K
Instrument	SAFE or equity	Operations (15%)	EUR 75K
Runway with seed	18-24 months	Buffer (10%)	EUR 50K

The business is sustainable at current burn (EUR 115/month). External funding is an acceleration tool, not a survival requirement.
