1. Executive Summary

Brubru is an AI-powered strategic advocacy platform purpose-built for EU policy professionals. It combines a conversational AI assistant with specialised legislative tools -- amendment drafting, compliance analysis, tender intelligence, legislative monitoring, predictive analytics, and a closed-loop feedback system -- to replace the fragmented workflow of lobbyists, consultants, trade associations, and government affairs teams operating within the Brussels ecosystem.

The EU public affairs market is valued at EUR 3-5 billion annually. Today, this work is done by expensive human consultants charging EUR 250-500/hour, using generic tools that have no understanding of EU institutional procedures. Brubru encodes deep procedural knowledge from 15+ EU institutional data sources into an AI platform that produces analyst-grade work at software costs.

---	---	---	--

"EU policy professionals spend EUR 500-1,000/day on work that AI can now produce in minutes. Brubru encodes 17 years of Brussels expertise into software -- analyst-grade work at software costs."

2. The Problem

EU policy professionals face a uniquely complex working environment: fragmented information across 15+ institutional sources, arcane procedural knowledge that takes years to develop, expensive manual deliverables, and no purpose-built tools. US political intelligence has FiscalNote (\$1.5B), Quorum, and Bloomberg Government. Legal AI has Harvey (\$3B+). EU policy has nothing.

PAIN POINT	TIME LOST	COST IMPACT
Monitoring 15+ EU sources daily	2-4 hrs/day	EUR 500-1,000/day in consultant time
Drafting a position paper	3-5 days	EUR 5,000-15,000 per deliverable
Compliance gap analysis for new regulation	2-4 weeks	EUR 20,000-50,000 per assessment
Understanding procedure for new dossier	1-2 days	EUR 2,000-4,000 per dossier
Finding relevant EU tenders	1-2 hrs/day	Missed opportunities worth EUR 100K+

3. The Solution

Brubru replaces fragmented workflows with a single AI-powered platform that understands EU institutional procedures natively. It is not a chatbot with EU data bolted on -- it is a purpose-built advocacy workbench designed around the specific deliverables and workflows EU policy professionals produce daily.

BRUBRU FEATURE	REPLACES	TIME SAVED
My EU Bubble	Manual monitoring of 15+ sources	80%
Document Generator	Manual position paper drafting (3-5 days)	90%
EU Law Comply	Compliance consultants (EUR 20-50K)	85%
Brubru Chat	Senior consultant Q&A (EUR 250-500/hr)	70%
Tenderator	Manual TED search (1-2 hrs/day)	75%
Amendator	Manual amendment drafting + XML formatting	60%

4. Product Suite

Eight integrated modules covering the full EU advocacy workflow: Monitor > Analyse > Draft > Comply > Predict > Bid > Improve.

#	MODULE	DESCRIPTION	TIER
1	Brubru Chat	Context-aware AI advisor. 4-provider chain (Mistral/Claude/GPT-4/Gemini), 15+ context sources injected per query, citation tracking, conversation memory, Beresol Knowledge Bundle (11 reports, 7 monitors).	All
2	My EU Bubble	Personalised monitoring dashboard: 33+ RSS feeds, Legislative Train (490+ files), 26 EP committee trackers, EC public consultations, predictions engine, document generation, analytics.	All
3	Amendator	XML-first amendment editor modelled on EP's AT4AM. AI drafting in natural language, Akoma Ntoso compliance, multi-format export (XML, HTML, PDF, Word), amendment workflow (Candidate/Tabled/Withdrawn).	Yellow+
4	EU Law Comply	Automated compliance gap analysis: document upload, requirement extraction, severity ratings, action plan timeline. Covers AI Act, GDPR, NIS2, CSRD, MiCA, DORA.	Yellow+
5	Tenderator	AI-matched EU tender intelligence from TED. Organisation profiling, SME suitability scoring, bid checklist generation, SPARQL market analytics, HuggingFace classification.	Blue
6	Document Generator	AI-powered position papers, MEP briefings, and talking points via step-by-step wizard. Links to specific legislation via CELEX numbers.	Yellow+
7	Predictions Engine	AI legislative forecasting: timeline (survival analysis), outcome, EP plenary vote (9 groups, 720 MEPs), Council vote (QMV), resolution leading indicators.	Yellow+
8	Feedback System	Closed-loop improvement engine: inline ratings, conversation quality scoring (0-10), knowledge gap tracking, hallucination suppression, 5 systematic improvement loops.	All

Plus: **Admin Panel** -- user management, feed management, chat analytics, feedback management, legislative tracking admin, system monitoring.

5.3 Why Now -- Three Converging Forces

1. Regulatory wave (2026-2028). AI Act, MiCA, CSRD, NIS2, DORA, Packaging Regulation -- unprecedented compliance deadlines hitting simultaneously.

2. AI capability threshold. LLMs crossed the quality threshold for analyst-grade regulatory work in 2024-2025.

3. Market vacancy. US has FiscalNote (\$1.5B) and Harvey (\$3B+). EU policy intelligence has zero purpose-built AI platforms.

6. Competitive Landscape

COMPETITOR	EU FOCUS	AI NATIVE	AMENDMENTS	COMPLIANCE	TENDERS	PREDICTIONS	PRICE
Brubru	Deep		XML				EUR 79-599
ChatGPT/Claude	None						\$20/mo
Harvey AI	Partial			--			Enterprise
FiscalNote	US only	--				--	Enterprise
Traditional consultancy			Manual	Manual			EUR 10K+/mo
EUR-Lex / OEIL							Free (raw)

Competitive Advantages

- 1. Domain specificity.** 29 purpose-built scrapers, 15+ institutional data pipelines, structured procedural knowledge -- 18 months of data engineering.
- 2. Workflow completeness.** Monitor > Analyse > Draft > Comply > Predict > Bid > Improve. No competitor covers the full loop.
- 3. Akoma Ntoso compliance.** XML-compliant legislative amendments in the OASIS LegalDocumentML standard used by EU institutions.
- 4. Cost structure.** Mistral primary = 15x cost advantage. EUR 79/month vs EUR 5,000+/month consultancy retainers at 90%+ gross margins.
- 5. Founder-market fit.** 7+ years EP + 10+ years EU policy advisory. The product is built by someone who has personally produced the deliverables it automates.

11. Team, Roadmap & Risks

Founder

Victor Sole -- Founder & CEO

- 7+ years at the European Parliament (policy, procedure, legislative drafting)
- 10+ years EU policy advisory (trade, digital, regulatory affairs)
- Full-stack developer: built entire Brubru platform solo
- Fluent in 6 languages (EN, ES, CA, FR, IT, NL)
- Based in Brussels

Key Hires

ROLE	WHEN	WHY
Head of Sales / BD	Month 3	Convert network into customers
Junior Developer	Month 6	Scale features, reduce bus factor
Customer Success	Month 9	Onboarding, retention, upsell

Roadmap

Risk Assessment

RISK	P	I	MITIGATION
Low conversion rate	Med	High	Improve onboarding, feature gates, free-to-paid triggers
Single founder	High	High	Document everything, hire early, build recurring revenue
Free user costs	Med	Med	Cap at 500 users, reduce free amendments
AI cost spike	Low	Med	4-provider fallback chain, Mistral primary (15x cheaper)
Generic AI competitors	Med	Med	Domain depth is the moat -- 29 scrapers, procedural knowledge
Slow enterprise sales	High	Med	Parallel SaaS + agency model, consultancy revenue funds patience

12. Funding & Use of Proceeds

Seed Round (Target M12-18)

Round size	EUR 500K - 1M
Valuation	EUR 3-5M pre-money
Instrument	SAFE or equity
Runway with seed	18-24 months

Use of Funds (EUR 500K)

Engineering (40%)	EUR 200K
Sales & Marketing (35%)	EUR 175K
Operations (15%)	EUR 75K
Buffer (10%)	EUR 50K

The business is sustainable at current burn (EUR 115/month). External funding is an acceleration tool, not a survival requirement.
